Prices are in UAE Dirhams and inclusive of 10% Municipality Fees, 10% Service Charge and Value Added Tax.

Notes:

1. Price list attached above are valid for 2021.

2. **Mbps** – Megabits per Second. This denotation is used to express the speed of the connection or data transfer speed.

3. All lines mentioned above can either be used as direct lines to end devices such as laptops or can be used for Wireless throughout C&I. For Wi-Fi, the Client will suggest the SSID (Eg: iMadinat) that he would like to use for people to connect to that internet line.

4. There are two types of Internet Lines.

Professional line is when the upload and the download limits are restricted (as per table above). Service providers say, the upload speed is one-thirds of the download limit. Professional lines are also called Asymmetrical lines as their download/upload limits are not identical.

Premium line is when the upload and download limits are the same. If you order a 100MB Premium line, then the client will get a speed of 100Mbps for download and 100Mbps for upload guaranteed. Such a line is also termed as Symmetrical lines as the download/upload limits are the same.

5. We provide **iMadinat** for free of charge to our clients in C&I. The speed for the same is **50Mbps / 12Mbps**. It is a Professional line (ADSL).

6. C&I & Madinat Jumeirah Resort Networks are independent in nature. Only under special conditions, do we publish a SSID which belongs to C&I in MAS Ballrooms, Magnolia and the Theatre. Under C&I comes Arena and its pre-function, Johara and its pre-function, Murjan and its pre-function, Meeting Room 1-4 and the Fort Island.

7. **iMadinat** is an open Internet connection. It does not require a username/password to connect. All Event specific lines are based on Client Requirements. They would provide us with the SSIDs to publish, username/password per SSID etc.

8. In general, to apply and receive an Internet Line from the Service Provider (DU), it takes 3-4 working days. But we would like to add a day or two to that count based on the amount of IT related requirements that comes with every event. IT related requirements can be cabling work that's required or Network related requests such as 'x' number of

SSIDs and 'y' number of wired connections, so on and so forth.
